

Disclaimer

The TATE Toolkit is intended to support the assessment, training and routine use of assistive technology for cognition (ATC) in support of clients with brain injury achieving their personal goals. It does not cover all possible evidence-based practices, devices or applications (apps), nor endorse any specific device or app. Systematic ATC assessment and training should be specifically tailored to individual needs. No claim is made as to the suitability of any particular practice or idea contained in this Toolkit for any specific client. The materials are not meant to and cannot replace the specialized training and professional judgment of health care, rehabilitation, and mental healthcare professionals. Neither the Center on Brain Injury Research & Training (CBIRT), the University of Oregon (UO) will be liable for any possible harm arising from the use of these materials.

Permission to copy, use, and distribute materials contained in this Toolkit is hereby granted without fee for personal, private, and educational purposes as long as the CBIRT, UO and the National Institute on Disability and Rehabilitation Research are credited. Reproducing materials for profit or any commercial uses is strictly forbidden without specific permission from the CBIRT and UO.
